Superior cool season growth and persistence

Mohaka is a broad leaved, densely tillered tetraploid hybrid ryegrass, having superior cool season productivity when compared to its predecessor Ohau, due to having a higher percentage of Italian ryegrass parentage. In commercial trials, Mohaka has exhibited additional growth throughout the growing season compared to like types and with the AR37 endophyte, it is likely to persist through to a second or third season in most ryegrass environments. It has a strong geographic fit in Tasmania, southern Victoria, coastal South Australia and in the high rainfall tablelands zones in Southern NSW.

High quality feed into late spring

Mohaka fits a wide range of farming systems, as it can be used in high performance dairy platforms, lamb and beef fattening enterprises and will make great quality hay and silage. It has a +20 flowering date that will push quality late into the spring. Mohaka's excellent rust tolerance and tiller density will see it become favoured over existing marketplace products.

Genuine oversowing option

Mohaka can be used as a multi-year Italian ryegrass. Its fast establishment and seedling vigour makes it a successful oversowing option into existing perennial ryegrass paddocks that are starting to thin. It fits into farms where a 2-4 year grass rotation is required and will be a great companion grass to Ecotain® environmental plantain, Choice chicory and Relish red clover.

KEY FEATURES

- High quality tetraploid ryegrass
- Better cool season growth than a perennial ryegrass
- More persistence than an Italian ryegrass
- Very high rust tolerance
- +20 flowering date providing high quality feed into late spring
- Genuine oversowing option due to high establishment vigour.
- Insect protection provided by AR37 endophyte

CHARACTERISTICS

Ploidy	Heading date	Endophyte options	Suggested sowing rates	Persistence
Tetraploid	+20 days	AR37	25-35 kg/ha pure stand 20-25 kg/ha with clovers and herbs 15-20 kg/ha for oversowing	2-4 years

“Mohaka produced plenty of high-quality feed”

Mohaka has performed well, producing plenty of high-quality feed, and the cattle really went for it. However, the real test has been the way it has survived two flooding episodes at my place and has grown really well, right into the early summer. It is still green now towards the end of January, and very strong in the drill rows.
